Stern to the Rescue.

STERN SEEBURG Entertainment GUIDE

STERN/SEEBURG ENTERTAINMENT GUIDE • VOLUME I • NUMBER 3

DATELINE!

Somewhere over the deep blue sea.

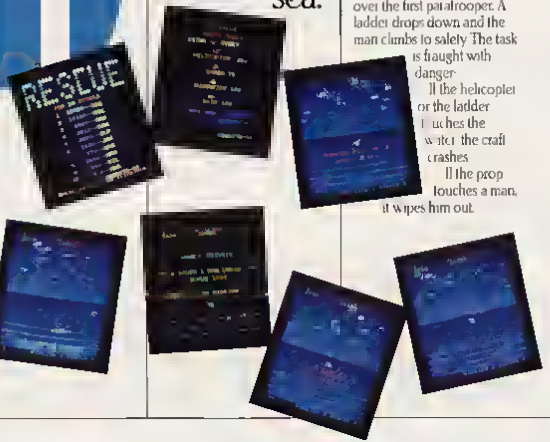
Paratroopers are sighted falling into dangerous waters. Attack helicopters hover above while enemy ships, subs, and sharks threaten below. Help arrives. A rescue chopper slips into enemy territories to save a specified number of men.

The Mission

As the mission begins, the pilot maneuvers his craft over the first paratrooper. A ladder drops down and the man climbs to safety. The task is fraught with danger.

If the helicopter or the ladder touches the water, the craft crashes.

If the prop touches a man, it wipes him out.



If the chopper flies away before the man is safe inside, he falls back into the water.

At the completion of every third mission, the pilot receives his points, a promotion in rank, and a bonus round.

Alternating between morning, evening and night, the missions become more difficult. Each level has its own combination of enemy attackers.

The Enemies

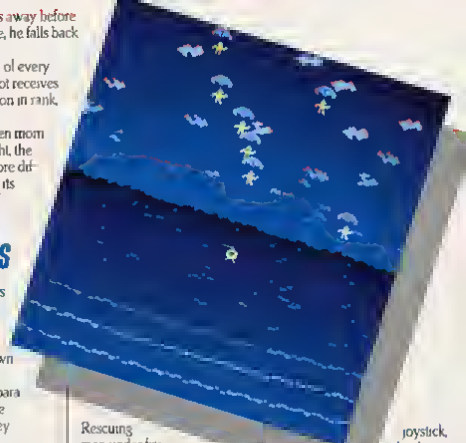
Enemy helicopters shoot at the rescue chopper. The enemies must be shot before they down the rescue craft.

Sharks circle the paratroopers and must be destroyed before they get the men.

Subs surface and the chopper can only wipe them out by bombing them.

Ships attack and the helicopter strikes back with a blitz.

Points are scored when the chopper hits the enemy.



Rescuing men under fire gives a 1,000 point bonus. The names and scores of the top ten pilots can be inscribed in the log.

Mission Control

Rescue is a real challenge. The pilot controls the movement of his chopper with the left joystick, the direction of the bullet fire with the right. The pilot attacks enemy submarines by pressing the "sub-bomb" button.

"Rescue" is factory-equipped with a standard ear-phone "jack." Stern saves the profit day.
